Write a C++ program which to demonstrate use of namespace in the program

```
#include <iostream>
using namespace std;
namespace ns1
{
int value() { return 5; }
}
namespace ns2
{
const double x = 100;
double value() { return 2*x; }
}
int main()
{
// Access value function within ns1
cout << ns1::value() << '\n';
// Access value function within ns2
cout << ns2::value() << '\n';
// Access variable x directly
cout << ns2::x << '\n';
Return 0;
}
```
