Title: Write a C++ program that illustrates the concept of Function over loading.

```
#include <iostream>
using namespace std;

float area(float r) {
   return 3.14 * r * r;
}

int area(int l, int b) {
   return l * b;
}

float area(float b, float h) {
   return 0.5 * b * h;
}

int main() {
   float r, b, h;
   int l, w;

   cout << "Enter radius of circle: ";
   cin >> r;
   cout << "Area of Circle: " << area(r) << endl;

   cout << "\nEnter length and breadth of rectangle: ";
   cin >> l >> w;
   cout << "Area of Rectangle: " << area(l, w) << endl;

   cout << "\nEnter base and height of triangle: ";
   cin >> b >> h;
   cout << "Area of Triangle: " << area(b, h) << endl;

   return 0;
}
```
