Write a program in C++ to Read and Display the information of Employees Using Multiple Inheritance. Use Basic Info and Department Info as the base classes of the Employee class.

```
#include <iostream>
#include <string>
using namespace std;

class BasicInfo {
protected:
    string name;
    int emp_id;
    char gender;

public:
    void getBasicInfo() {
        cout << "Enter Employee Name: ";
        cin >> name;
        cout << "Enter Employee ID: ";
        cin >> emp_id;
        cout << "Enter Gender (M/F): ";
        cin >> gender;
    }

    void displayBasicInfo() {
        cout << "Name: " << name << endl;
        cout << "Employee ID: " << emp_id << endl;
        cout << "Gender: " << gender << endl;
    }
};
```

```
class DeptInfo {
protected:
    string dept_name;
    string designation;
    float salary;

public:
    void getDeptInfo(){
        cout << "Enter Department Name: ";
        cin >> dept_name;
        cout << "Enter Designation: ";
        cin >> designation;
        cout << "Enter Salary: ";
        cin >> salary;
    }

    void displayDeptInfo(){
        cout << "Department: " << dept_name << endl;
        cout << "Designation: " << designation << endl;
        cout << "Salary: " << salary << endl;
    }
};

class Employee : public BasicInfo, public DeptInfo {
public:
    void getEmployeeData() {
        cout << "--- Enter Employee Details ---\n";
        getBasicInfo();
        getDeptInfo();
    }

    void displayEmployeeData() {
        cout << "\n================================\n";
        cout << "       EMPLOYEE DETAILS        \n";
        cout << "================================\n";
```

```
        displayBasicInfo();
        displayDeptInfo();
    }
};

int main() {
    Employee emp;

    emp.getEmployeeData();
    emp.displayEmployeeData();

    return 0;
}
```
